

Integrated, Accessible, Secure SCADA Hosting Services

Integrated

With over 30 years of integration experience, we will design a system with the best instrumentation and control components for your process needs. We will install them and make sure they all work together. And unlike many integrators, we service everything we sell, so InstruLogic **SMART Support** can be included with every system.

Accessible

Built on Ignition by Inductive Automation, InstruLogic Cloud brings all of your remote measurement and control assets under SCADA control. Remote-site data can be automatically logged to secure databases for reporting, analysis and predictive maintenance. Alarms can be instantly analyzed and managed, reducing unnecessary travel-time delays. And all treatment operations can be made viewable on your desktop, as well as any web-connected tablet or smart phone.

Secure

Rarely will a small to medium sized treatment operation have the resources to monitor for cybersecurity threats and keep all their software up to date with the latest security patches. Hosted on on **Amazon GovCloud**, and managed by SCADA and security experts, InstruLogic Cloud is more secure than SCADA currently used by most municipal operators.

Customizable

Some cloud based SCADA hosting services only provide canned process screens with limited options. InstruLogic Cloud is fully tailored to support your specific treatment processes, equipment and configuration needs. We can even structure payment options that are customized to complement your capitol and operating budgets.

Scaleable

With InstruLogic Cloud, you only pay for what you need. Systems are sized for current requirements, not projected worst-case future needs. If you need more capacity later, the system can be expanded incrementally. So operating costs scale up incrementally as well.
